Dear Hiring Manager / Committee,

I am very interested in applying for the summer position to support IT projects at Western Forest Products Inc. As a third year computer science student at University of Victoria, working at Western Forest Products Inc is a precious opportunity to put my learning to good use and It would be honored if you consider me as a member as well as a new learner in the industrial world.

My skills and experience match up well with the qualifications specified in job posting information. During the past two years, my computer science courses have given me programming experience in Java, Python, and C. I gained some front-end programming experience on HTML, CSS, and JavaScript and built my own web in the course *World Wide Web and Mobile Applications*. Also, within this term, I am just taking Database Systems course which SQL language is included.

The past semesters, I did a good job at second level algorithm courses, which are Algorithms and Data Structures I and II. Besides that, I learned well for the *Software Development Methods* course, which strengthened my skills to solve complex problems and develop basic programs. I believe this shows that I could do research and find solutions to problems without much supervision, and overcome obstacles with hard work. I would like to learn how to better collaborate with other team members of the team and add value to their work.

I believe I could be a valuable member to the talented team of the developers at Western Forest Products Inc. My resume expands on the points I have made above and I would like to thank you for taking the time to consider me for your Software Developer Co-op position. I am available to do a four or eight-month co-op.

I am looking forward to meeting you and discuss about this opportunity further. I can be reached at 778-350 7239.

Sincerely,

Jun Jie Wu
